Dear Hiring Manager,

I'm excited to apply for the Security Engineer II role at Flexe. I bring hands-on security engineering experience from mature environments (Meta, ExtraHop) and I focus on turning strong security execution into repeatable, scalable programs. Below is how my experience maps to your responsibilities:

### **Security Evaluation & Risk Management**

In my Security Engineer role at Meta, I've performed risk-focused evaluations across multiple surfaces, running **MITRE ATT&CK based hunts**, **surface mapping**, **TTP enumeration**, and influencing security posture through clear prioritization and remediation paths. I'm also comfortable approaching problems with an attacker mindset through **bug bounty / offensive security** experience.

### **Incident Response & Forensics**

At Meta, I supported end-to-end response for incidents including **nation-state activity**, contributing to **surge scoping**, investigation, and coordinated remediation. I'm effective in cross-functional incident handling and communication, partnering with internal development teams and stakeholders to keep response consistent and well-documented.

### **Security Automation & Monitoring**

I've triaged high-volume alerts, improved detection quality, and turned recurring investigation patterns into **playbooks and escalation paths**. I also independently designed, executed, and maintained an internal **RMM abuse control pipeline** at Meta to reduce risk from remote tooling misuse and improve investigative visibility. I use **Python extensively** to automate enrichment and response workflows and reduce operational toil.

### **Security Training & Awareness**

Throughout my career, I've delivered security awareness sessions and promoted adoption of practical standards and best practices. In highly cross-functional settings, I've also led situational awareness and information-sharing briefings to align teams during evolving risk.

## **Research & Innovation**

As a Security Researcher at ExtraHop and within a Threat Intelligence function at Meta, I've converted research into actionable defensive outcomes, new detection opportunities, tuned monitoring, and concrete recommendations that strengthen security over time.

I'd welcome the chance to discuss how I can help Flexe strengthen security evaluation, monitoring, and incident response as the platform scales.

Sincerely,  
Atharav Hedage
